

Dibond[®] works great in a wide range of applications, including signage, digital, show exhibits and screen printing. Here, it is used for an outdoor display.

Strong, Lightweight, Versatile Material

Let your creativity go wild using Dibond material from Alcan. It's made from two sheets of .012" aluminum with a thermoplastic core. Strong and lightweight, this incredibly flat material is the ideal choice for a variety of applications because it's so easy to fabricate.

You can bend it, rout and fold it, cut and saw it, drill and punch it, print or paint it, laminate and photo mount it. With Dibond your design possibilities are unlimited!

And unlike some materials, the multipurpose substrate is resistant to breakage, can be exposed to any kind of weather, provides sound and vibration dampening. Dibond's rigid panels require little or no substructure support, plus fewer extrusions, saving you material costs.

Dibond material is painted on both sides and is available in 4' x 8', 4' x 10', and 5' x 10' sheets in varying thicknesses. Dibond provides real value so you can afford to be creative!

If you are printing on just one side but want all of the features of Dibond's white sheeting, try **Random-Back sheets from Dibond**. The only difference is one side is white and the other is a random color, for a fraction of the cost of white-on-white sheeting!

Need an economical option for flat sheet applications? Then try **e-panel**, which has thinner (.008") aluminum facers than Dibond. You can direct print, rout, saw cut or punch e-panel for long-lasting interior or exterior signage.

Contact your nearest Midwest branch to place your order today!

Use Dibond for your:

- Post and panel signs
- Wall-mounted signs
- Directory signs
- Illuminated and non-illuminated signage
- Fascia
- Awnings
- Sign Blanks
- Routed sign faces
- Backing for channel letters
- Store front signage
- Street signs
- Exhibit booths
- P-O-P displays
- Billboards
- Digital/electrostatic printing
- Kiosks
- Photo mounting
- ...and more
