

## 15-ounce Scrim Vinyl Banner Material - Matte & Gloss

15-ounce premium ImageStar scrim vinyl banner sets a new standard for quality. This coated scrim PVC banner is designed for eco-solvent, solvent, UV-IR curable, and screen printing ink sets. It has one of the highest white points on the market and a smooth image surface, resulting in outstanding dot control and color pop. It can be used indoors or outdoors, and offers three-year outdoor durability without lamination.

**LYSON**

Pair your media with Lyson digital inks from Nazdar. These inks feature excellent adhesion and consistent color density with proven resistance to the effects of UV degradation and color fading. Lyson inks are available for a variety of printers, including the Mimaki JV3, and are compatible with a wide range of media and substrates.

## 9-ounce Premium Mesh Banner with Liner

ImageStar Mesh Banner with liner is a high-quality PVC mesh banner material coated for eco-solvent, solvent, UV-IR curable and screen inks used in today's wide- and grand-format digital printers. This mesh banner product contains a very strong polyester scrim base fabric and features coated, one-piece construction with a cloth liner, allowing for outstanding image quality with great dot control and lay-flat properties. The lightweight substrate and reduced wind resistance make this the ideal solution for display graphics for sporting events, outdoor venues, construction site scaffolding, fences and building wraps over windows. It can be used for indoor or outdoor applications and provides two-year outdoor durability.

## ImageStar Finishing Recommendations

**Grommeting:** Grommets should be placed in the hemline along the length of the banner so the grommet is through two layers. Corner grommets should be placed where the length and width hems cross to provide four layers of strength. A reinforced corner is also recommended to increase durability.

**Hemming:** Banner tape can be used and is preferred to sewing. If sewing, a double-stitched hem is recommended with a maximum of five stitches per inch. Banner tapes at least 4-mil thick perform the best.

Increase production and quality by investing in a new digital printer from Midwest! We offer the highest quality equipment from leading manufacturers such as Mimaki and Roland DGA.

## Banner Making Supplies

Don't forget about the little things! Count on Midwest for all your miscellaneous banner making supplies, including...
